DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, 13, drawn to a nucleic acid molecule of SEQ ID NO: 9, encoding SEQ ID NO: 10, a vector, a host cell, and a method of producing a protein, classified in class 435, subclass 69.1.
- II. Claims 9-10, drawn to a protein of SEQ ID NO: 10, classified in class 530, subclass 350.
- III. Claims 11-12, drawn to an antibody which binds to SEQ ID NO: 10, classified in class 530, subclass 387.1.
- IV. Claims 14-19, drawn to a method of compound identification, classified in class 435, subclass 7.2.
- V. Claims 20-22, drawn to a compound which binds SEQ ID NO: 10, as it reads on, for example, a peptide, classified in class 530, subclass 300.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III and V are independent and distinct, each from the other, because they are products which possess characteristic differences in structure and function, and each has an independent use, that is distinct for each invention which cannot be exchanged. In the instant case, the nucleic acid of invention I has a different structure than the protein of invention II, the antibody of invention III, and the compound of invention V. The uses of the products cannot be exchanged because the nucleic acid can be used for the production of protein, which the polypeptide can be used for the production of antibodies, and the antibody can be used for the

Art Unit: 1646

isolation of a polypeptide. The compound cannot be used for the production of protein, or isolation of protein

Inventions IV and V are independent and distinct, each from the other, because the structure of the agonist or antagonist is independent of the means of identifying it, especially as the functional assay of group IV would reasonably be expected to identify numerous agonists and antagonists having distinct structures and functions.

Inventions II and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the protein of Group II can be used for the production of antibody.

Inventions I and V are unrelated to invention IV. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the nucleic acid of invention I, and the compound of invention V cannot be used in a method for the identification of a compound which binds to a polypeptide of invention II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1646

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
